

# Changelog

## *Update 0.9*

### Spring Cleaning

- Moved GUI code to FXML to remove clutter from main and make it easier to read.
- Each tab now has it's own controller class (everything was shoved into main before)

### GUI

- Completely rebuilt the GUI to make it (arguably) more appealing and user friendly.

### Exception Handling

- Added exception handling where it was needed.
- You will now receive an error message when you use an invalid value.
